

**ANALYTIC CITY**  
in Berlin Adlershof

**Adlershof.** Science at Work.

## ANALYTICS - A FIELD FOR THE FUTURE

Today, the field of analytical sciences has become a key interdisciplinary tool for many solutions and innovations in science and engineering. Whether for the detection of harmful plasticisers in children's toys, the structural analysis of new engineering materials, or the authenticity of foodstuffs, the findings of analytical chemistry enhance greatly the value of many products and processes as well as the quality of our own lifestyles. Analytics also adopts the role of comparable significance in the controversies surrounding the social policies of the future, supplying hard facts for rational discussions on food safety or climate change.

The analytical sciences represent a coherent discipline at the boundaries between chemistry, physics, and biology, and their evolving methods and instruments never cease to provide new insights into the atomic and molecular processes of these and other fields.

Adlershof has a long and successful tradition of instrumental analysis and scientific instrument manufacturing that is now being continued by the local companies as well. Today, the Humboldt University of Berlin is one of the few universities in Germany where analytical chemistry is still completely integrated in the field of study. The non-university institutes and companies at Adlershof have unique opportunities and provide essential contributions to the site's analytical skills for research, training, and services. Following the success of the School of Analytical Sciences Adlershof (SALSA) in the 2012 Excellence Initiative, Adlershof can now take the opportunity to adopt a position as the Analytic City Adlershof, an excellence and innovation centre with a highly academic and entrepreneurial core.

This brochure presents a digest of the many partners at the location and provides a basis for new joint ventures.

Prof. Dr. rer. nat. Ulrich Panne  
Humboldt-Universität zu Berlin &  
President of Bundesanstalt für Materialforschung und -prüfung (BAM)  
Spokesman of the Joint Initiative of Non-University Research Institutions  
in Adlershof (IGFAF)

## BERLIN ADLERSHOF – AN ANALYTIC CITY

Berlin Adlershof is a key initiator of Berlin's scientific and economic development. Furthermore, it is one of the most successful high tech locations in Germany and enjoys an excellent reputation on the international level as well.

Berlin Adlershof covers an area of 467 hectares (1,038 acres). Currently, an area of 102 hectares is covered by buildings. There are about 15,500 people working at more than 1,000 companies and six university and ten non-university research institutes. About 9,500 students are enrolled at present at the science institutes of Humboldt University of Berlin (HU).

All empty space in Adlershof will presumably be developed by the year 2020. Thus, the site

still offers best conditions for the settlement of additional innovative companies and scientific institutions.

At this stage, Adlershof presents a number of fascinating interrelations between university and non-university institutes and businesses. A unique feature of the site is its accumulation of institutions dealing with analytical issues. In addition to research and teaching, Adlershof offers a home for

- methodologists and equipment developers,
- service providers,
- equipment marketers, and
- producer.

The range extends from material and environmental analytics to biological, medical, and food chemistry subjects, to process and

industrial analytics as well as measurement technologies.

This rich diversity of applications, business models and analytical methods has given rise to a huge range of offers in the analytical field, representing all of the conventional analytical methods and technologies for

- chromatography,
- spectroscopy,
- surface/structural analysis,
- microscopy, and,
- special methods.

These are refined in close cooperation between research and business. Many of the Adlershof institutes and companies operating in the analytical fields hold a leading position in the international scale. For instance, the HZB Helmholtz-Zentrum Berlin for Materials and Energy and its synchrotron radiation source BESSY II attract every year a large number of international scientists to Adlershof. The HU Berlin is represented by its Chemistry Department on the Science and technology park. Today, the university ranks among the ten best in Germany and also enjoys an international reputation as one of the leading scientific institution for training and research in the fields of analytical chemistry.

WISTA-MANAGEMENT GMBH is the operator of the Adlershof Science and Technology Park. Its assignments also extend to the promotion of networks between science and business, national and international cooperation, and PR work.

The company is especially involved with networking of the location's companies and institutes in the field of analytics and analytical technologies in order to channel their potential into the Analytic City Adlershof competence centre, mobilising local synergies. Moreover, it is to visualise the huge diversity and performance of the Adlershof institutes in analytics and analysis measuring techniques in such a way as to attract interested parties to the location more easily. At the same time, WISTA-MANAGEMENT GMBH receives support from the Technologiekreis Adlershof (an association of innovative companies), of IGAFA, the scientific network representing ten non-university research institutions located in Berlin Adlershof, and the HU Berlin.

## LIFE SCIENCES

Berlin Adlershof holds an unique feature when it comes to analysing and resolving analytical issues. Here is where the entire value chain is represented, from basic research and theory to the development and realisation of methods and equipment to services and marketing.

## EQUIPMENT DEVELOPMENT AND MARKETING

The development, manufacture, and marketing of analytical equipment augments the analytical expertise at Adlershof. The range of products extends from componentry (detectors, lamps, sensors, etc.) to finished products (chromatographs, spectrometers). Prototypes as well as small, medium, and large batches are produced for national and international customers.

## ENVIRONMENTAL TECHNOLOGY

Environmental analysis as a subdiscipline of chemical analytics finds strong partners in Adlershof, such as certified service providers as well as in research and development. In addition, a number of institutions are working on technologies for ecological recovery. Adlershof companies also possess expertise in the safety relevant fields of environmental analysis, e.g. in the detection of chemical warfare agents and explosives, biological substances, and drugs.

## ANALYTICAL CHEMISTRY

The Adlershof-based Department of Chemistry at the Humboldt University of Berlin (HU) is one of the world's leading research and educational institutes in the field of analytical chemistry. This institute launched the graduate School of Analytical Sciences Adlershof (SALSA) as part of the 2012 Excellence Initiative, involving the setup of application labs for the interdisciplinary development of new materials and analytical methods, also in close cooperation with business enterprises at the location. At the same time, Adlershof is also home to both non-university research establishments such as the Federale Institut for Materials Research and Testing (BAM) and medium sized companies that are using the latest methods for special assignments in analytical chemistry.

## SURFACE ANALYSIS

A material's wettability, abrasion resistance, or susceptibility to corrosion depends essentially on its surface or structural properties. Adlershof companies and institutes are developing methods and equipment for surface and structural analyses. The range of applications extends e.g. to thin layer measurements, electron microscopy, and structural analytics.

## OPTICS/PHOTOVOLTAICS

Adlershof ranks among the world's leading research and development locations for optical technologies, focusing on laser technologies, laser medical engineering, optoelectronics, and technical optics. This sector provides work for nearly fifty companies in Adlershof, some of which are geared closely to the expertise field of surface and structural analysis.

## UNIVERSITY RESEARCH INSTITUTE

With over 9,500 students, the HU Campus is a vibrant centre in Adlershof. Besides the non-university research institutes and the tech based companies, the science institutes of the HU function as one of the location's supporting pillars. The Graduate School of Analytical Sciences Adlershof (SALSA) is pursuing an interdisciplinary approach in training and research and will be the academic core of the Analytic City Adlershof.

## PROCESS ANALYTICS

Fast, low priced, and reliable investigation methods are essential for the monitoring of production processes and the determination of substance properties and compositions in production plant. Adershof is home to equipment manufacturers, researchers, and industrial users in the field of process analysis. A wide range of measuring methods like X-ray analytics and optical sensor systems are used for investigations into biotechnological and microbiological processes.

## CLASSIFICATION OF THE COMPANIES

The following tables present a number of companies and research institutes including a summary of their analytical skills. These data were obtained in 2014 by WISTA-MANAGEMENT GMBH on the basis of questionnaires.

The first section lists companies and research institutions according to the analytical methods and techniques they apply, develop, and/or market. These establishments and institutes are identified according to their sector and activity.

The centre section lists the establishments and institutes with contact persons, contact details and fields of activity.

The last section presents a site map. It shows the locations of all establishments and institutes that provided the data for this brochure.

## CLASSIFICATION OF THE COMPANIES ACCORDING TO THEIR TO MEASURING METHODS, SECTORS AND ACTIVITY

CHROMATOGRAPHY					SECTORS				ACTIVITY	
	CE [CAPILLARY ELECTROPHORESIS]	FPLC [FAST PROTEIN LIQUID CHROMATOGRAPHY]	GC [GAS CHROMATOGRAPHY AND COUPLED METHODS]	GEL ELECTRO-PHORESIS	GPC/[SEC] [GEL PERMEATION CHROMATOGRAPHY]	HPLC/[LC] [HIGH PERFORMANCE LIQUID CHROMATOGRAPHY AND COUPLED METHODS]	IC [ION CHROMATOGRAPHY]	SFC [SUPERCritical FLUID CHROMATOGRAPHY]	UPLC [ULTRA PERFORMANCE LIQUID CHROMATOGRAPHY]

## TRAFFIC CONNECTIONS

### BY CAR

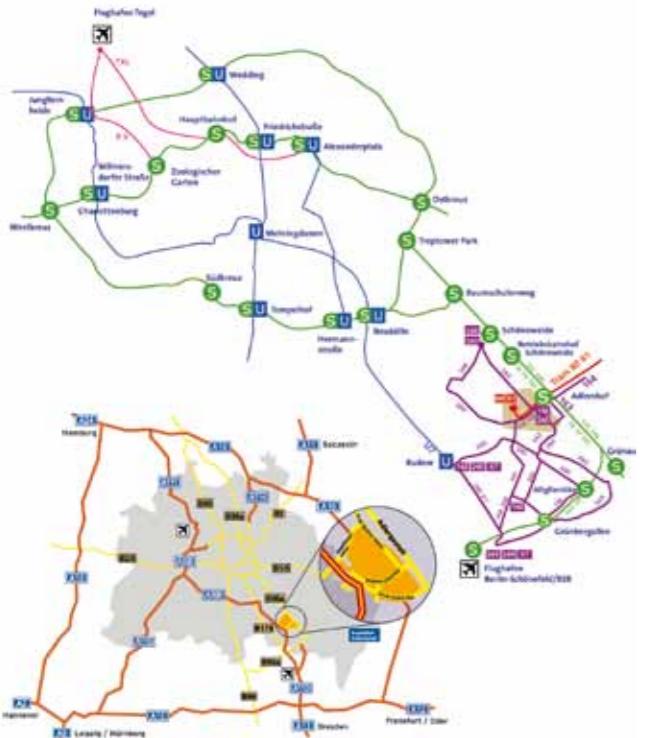

Berliner Ring A10

- At Schönefelder Kreuz, merge into the A 113 in direction „Berlin-Schönefeld Airport/BER“
- Exit at „Adlershof“
- Inner city highways A100/A113
- Take inner city highway to Berlin-Schönefeld Airport/BER
- Exit at „Adlershof“
- City centre
  - Follow „Bundesstraße 96A“ in direction „Flughafen Berlin-Schönefeld/BER“
  - Turn right at the S-Bahn station „Adlershof“ and merge into „Rudower Chaussee“

### BY PUBLIC TRANSPORT

Hauptbahnhof (central railway station)

- Take the S-Bahn S5, S7 or S75 until reaching „Ostkreuz“ station, then take the S8 or S9 until reaching „Adlershof“ station
- Berlin-Schönefeld Airport/BER
  - Take the S9 or S45 for 3 stations until reaching the station „Adlershof“
  - Bus 163/164 to „Adlershof“
- Tegel Airport
  - Bus TXL „Beusselstraße“ railway station
  - Take the S-Bahn line S41 to „Greifswalder Straße“, then S85 to „Adlershof“
    - Or
    - take the S-Bahn line S41 to „Schönhäuser Allee“, then S8 or S9 to „Adlershof“
